## Professional Summary

I'm a dedicated software developer with a passion for growth and learning. Primarily skilled in web development, I'm eager to expand into new domains. With a proactive learning approach and a commitment to excellence, I aim to contribute effectively to projects and teams, continuously enhancing my skills and propelling my career forward in the dynamic software development field.

## Skills

- Web Development
- Mobile app Development
- Api Development and Integration

## Tech Stacks

- Python
  - JavaScript
  - TypeScript
  - PHP
  - SQL, MySQL
- Laravel
  - Angular
  - Bootstrap
  - Tailwind
  - AWS
- Git
  - React
  - React-native
  - Expo
  - Docker

## Experiences

### Software Developer —Quadcube Technologies

April 2024 ~ Current

A company that has multiple services one of which is system development which is targeted to regional clients.

- One of my key responsibilities is managing a complex system for an enterprise client with five branches across Samar and Leyte. This system integrates inventory, data processing, employee management, and POS operations. I am responsible for maintaining and updating the system, resolving bugs, and implementing new functionalities based on the client’s needs.
- The company software development department uses an in-house PHP framework to develop web-based systems, and I am responsible for managing and maintaining this framework. Since it is the foundation of all company software projects, my role has a direct impact across the organization. My tasks include optimizing performance, troubleshooting issues, and enhancing core functionalities such as system structure, routing, cache management, and database architecture.
- The company framework was developed in 2022 by our CTO/CEO, is a sophisticated tool designed to accelerate the development of management systems. It shares many similarities with Laravel, with several modules directly inspired by it. Through continuous use across all projects and ongoing improvements, the framework has evolved into a stable and reliable platform..
- As AI adoption gained momentum, the company decided to invest in integrating AI into its systems. I am responsible for developing and managing an AI server that leverages *Ollama* to serve open-source large language models (LLMs). Given cost considerations and limited expertise, we chose open-source LLMs for their practicality and flexibility. My responsibilities include creating automation scripts for tasks such as processing email invoices, orders, and receipt files. I also work on integrating AI into our core framework and projects, identifying areas where AI can deliver the most value.
- I was also tasked with developing a SaaS-based PMS (Property Management System) website for hotels. This project involved designing core PMS functionalities, including client-specific domains and dedicated databases—features that added complexity due to the system being delivered as an online service. I also integrated payment gateways such as PayPal and Maya, and developed several complex modules to extend system capabilities. I independently completed the full development of this platform in under two months, well except for the brochure site for this platform.

**Software Developer — Freelancer**

Nov. 2023 ~ April 2024

I've been working directly with clients developing websites and applications

- In addition to my role in developing a Laravel-React website, I expanded my skills by contributing to the development of a mobile application. Using Expo and React Native frameworks, I successfully implemented new features, ensuring seamless functionality across mobile platforms (Android and IOS), completing the tasks given on me by the client, one of which is an improvement and finishing a mobile app and deploying it to the market, the app reel streaming app for a specific group of people and tackles integration to a backend web server.

**Software Developer — Intechsive Software Development, Tacloban City**

Feb. 2023 - Nov.2023

Being promoted as a software developer takes me as the team lead developer of most projects tasked to me.

- Successfully undertook the development of two projects simultaneously. Firstly, I led the creation of a comprehensive Laravel Barangay Information System, integrating a diverse set of functionalities crucial for efficient barangay operations. Additionally, I played a key role in developing a Multi-Tenant Business Management website, leveraging Laravel for the backend and Angular for the frontend.
- In my capacity, I assumed the responsibility of mentoring junior team members and conducting thorough code reviews for their project contributions. While I continued to be mentored by a senior developer, this experience heightened my overall project awareness and sense of responsibility, fostering collaborative efforts within the team.

**Junior Software Developer— Intechsive Software Development, Tacloban City**

Nov. 2021 - Feb. 2023

After graduation, I dove into real-world experiences beyond academia, enriching my skills. Through intensive training in agile project management, I gained proficiency in dynamic project environments. At ISD, an esteemed outsourcing firm, I contributed to diverse projects, refining my abilities and expanding my professional horizons.

- Proficiently integrated UX/UI designs..
- Became a full stack developer in only a month joining the company.
- Deployed websites in AWS using ec2 as its server as well as configuring the DNS , S3 for storage and SSL.
- Work on developing a social media website.
- Work on an internal medical part time recruitment website and be able to complete it within the given time frame despite being the only developer on it midway.
- Work on a live website with hundreds of users. My main task was implementing new functions, removing bugs and maintaining the server.
